This data is for the last 30 days on the main branch (Mar 4 to Apr 4) since that was the easiest way to track the metrics for commit history. Final documentation commits are not included here as they are on a separate branch (FinalDoc). Stanley commited a lot since he was working on the dynamic machine learning model and was continuously adding data to the model to ensure it was running properly and had accurate data. Team members also contributed to this data process but it was trained on Stanley's computer so he pushed the changes.

The team recently started using the git issue tracker to document issues after it was mentioned in the Rev0 demo by Dr. Smith, before that the team brought up issues with the project through our primary communication tool, Discord. However for better tracability we started using the git issue tracker for the remainder of the project. Cassidy authored many issues as she was the note taker for meetings and lectures.
